GLOBALIZING THE FCS CLASSROOM AND INTEGRATING SUSTAINABILITY PERSPECTIVES

Creativity and innovation have long been features of home economics/family and consumer sciences, with their focus on problem solving and design solutions to enhance individual and family wellbeing. Fresh attention on the importance of these 21st century skills as necessary to survive and thrive, especially with a lens for sustainable development, provides remarkable opportunity for HE/FCS educators.

This workshop is designed to inspire and invigorate educators to explore and make connections of creativity and innovation with mindsets such as globalization and sustainability and then develop strategies to use as a platform for strengthening their programs and the profession. Join HE/FCS educators from around the world to explore model pedagogy that can enhance relevant capabilities in these areas and to build design thinking applications for curriculum renewal.
